## ABOUT ME

---

Fourth-year undergraduate student with a good understanding of theoretical concepts and problem-solving. Passionate about learning new technologies and developing practical solutions using technology.

## OBJECTIVE

---

To secure an internship where I can utilize my skills in programming and software development, gain practical experience, and contribute effectively to team projects.

## EDUCATION

---

|                                         |                  |
|-----------------------------------------|------------------|
| <b>Vasavi College of Engineering</b>    | <b>2022-2026</b> |
| B.Tech-Computer Science and Engineering | CGPA: 8.48       |
| <b>SLB TSRJC Vikarabad</b>              | <b>2020-2022</b> |
| Intermediate-MPC                        | Per:95.9         |
| <b>ZP High School</b>                   | <b>2019-2020</b> |
| SSC                                     | CGPA:10.0        |

## PROJECTS

---

|                                               |                               |             |
|-----------------------------------------------|-------------------------------|-------------|
| <b><u>Surplus Food Reduction Platform</u></b> | <u>Flask, HTML/CSS, MySQL</u> | <b>2024</b> |
|-----------------------------------------------|-------------------------------|-------------|

A surplus food reduction system efficiently redistributes excess food from donors to NGOs, minimizing waste and aiding those in need.

**Food Donation and Redistribution:** Connects donors (restaurants, events, individuals) with NGOs to distribute surplus food.

**User Friendly:** Separate login/signup for donors and receivers, enabling easy food listing and requests.

**Database Integration:** Stores donor, receiver, and food donation details securely using SQLite.

**Real Time Tracking:** Allows NGOs to view available food donations and claim them efficiently.

|                                          |                         |             |
|------------------------------------------|-------------------------|-------------|
| <b><u>Deep Fake Detection System</u></b> | <u>Python, HTML/CSS</u> | <b>2024</b> |
|------------------------------------------|-------------------------|-------------|

Deepfake Detection System helps identify manipulated images and videos using AI-based techniques.

**Face Verification:** Detects and compares facial features using FaceNet and MTCNN to catch tampered media.

**Image & Video Input:** Supports both image and video files through an easy-to-use Gradio interface.

**Results:** Uses Grad-CAM to highlight the manipulated regions, helping users understand the results clearly.

## TECHNICAL SKILLS

---

**Languages:** Python,C,C++

**Web Technologies:** HTML, CSS, JavaScript

**Core Software:** Data Structures and Algorithms, OOPS Concepts
